

A UMAP plot showing the distribution of cell clusters. The x-axis is labeled 'UMAP_1' and ranges from -10 to 10. The y-axis is unlabeled. The plot displays a complex, multi-lobed structure of points. The points are colored according to their cell cycle phase, with a color scale ranging from red (G1) to blue (M). The clusters are distributed across the plot, with a large central cluster and several smaller, more isolated clusters. The color gradient indicates the progression of the cell cycle across the different clusters.
